

Canada's First People

Revelations Laid Bare

An apparent spearhead excavated in an equally ancient house is the discovery wanted by scientists to help fill in about 10,000 years.

Dr. J. J. Rasmussen, chief of the anthropological division of the National Museum, said Canadian archaeologists have discovered the oldest period of human occupation on the coast that further information about the Indians' first people may be assembled.

The Polson point, evidently the point of a spear and used for chipping chert stone, is the only relic of the oldest race of Americans. Their tools were established by geologists found in the United States, chiefly in Colorado, New Mexico, Nevada, and Utah. Geologists said these formations were from 15,000 to 20,000 years old, and it has been assumed that Polson stone found on the surface in Canada must be about the same age.

Most Polson Point discoveries have been made on the prairie, and it may be that some were carried there by the first men who crossed from Alaska to the mainland. It is the oldest relic found in Canada that the Indians used for the tools of the Polson point, and that Polson point has been found only in the vicinity of the mountains, indicating that the wanderers followed game from the north as they descended.

"Surface discoveries of Polson points are not particularly helpful," Dr. J. J. Rasmussen said. "The points in the lake formations in which they have lain for so long they cannot be more than a few hundred years old."

One was found embedded in a bone we could establish the bone was really by studying the bone. It was found in the same period in which these animals lived."

The Polson men in Canada were extraordinary hunters and hunters they might hunt—or feed—using a three-toothed bone, a type of spearhead, a stone, a giant skull, and the mammoth.

Worked With Edison

Last Of Edison's Laboratory Assistants Dies

Frank Jell, the last of the seven laboratory assistants who worked with Thomas A. Edison, died at age 72, to give the world the incandescent lamp, and who died on Feb. 10, at Petoskey, Mich. Edison, at the age of eighty, began work with the great inventor as a boy in 1875. He worked with Mr. Edison until one day in February, 1882, when the latter said to him: "Francis, I want you to be my helper for the rest of my life. You are the only one who understands the new lamp and meter over there. I have planned for you to be my assistant."

Mr. Jell went to Europe in 1882 and did not come back until 1883. He was in Paris, where he was engaged to superintend the reconstruction and the opening of the Edison Museum.

World's Longest Fence

Ambition Felt Being Done By Texas Cattle Raisers

The longest fence in the world will be one built on the north bank of the Rio Grande if plans of the American Committee of the Rio Grande Southwestern Cattle Raisers' Association mature.

It is proposed, to build a fence approximately 500 miles long, extending from the Gulf of Mexico to the mouth of Devil's river about 12 miles north of Del Rio, Texas. Beyond that there it has been estimated that natural barriers are said to make the fence unnecessary.

The proposed fence would prevent predatory animals, livestock and wild game roaming between Mexico and the United States.

Reverend For Officers

London Club Sometimes Entertains Thousand Men In One Day

Thousands of officers on foot and horse, London, and the Royal Household in the Officer's Bursary club at Grosvenor House. This club was founded by the Duke of Devonshire in 1800, and it has been estimated 12,000 officers, 40 per cent of whom have come from overseas, are members of the club. Many are of the highest rank, and the club is a social center of a single Sunday.

According to estimates, someone in America will be struck by a meteorite every 8,200 years.

On Jan. 10, 1920, red coral beads were highly recommended for use to wear on cutting teeth.

Poultry Colony House

Feathered Fowl and Farmers Will Find It Most Handy

One of the most useful houses a poultry grower can possess is a colony type house, says M. MacBride, Dominion Experimental Station, Ottawa, British Columbia. This applies not only to the farmer keeping a small flock but also to the poultry raiser on the business on a larger scale.

A very valuable feature about the colony house is that it can be used for many purposes. It may be made available as a brooder house, incubator, laying house, or hatching house.

Sub-stations at Smithers, B.C., a 20 x 12 colony house built in the fall of 1909 and put to use in the following spring. The results with this house are far from gratifying. In the first place this house was used as a brooder house with the necessary equipment such as brooder stove, etc., installed for the purpose. At the end of the brooding period or when the chicks were old enough to do without heat the stove was removed. In this time the chickens were separated from the brooder and moved to another house.

With Herbert Morrison, Britain's minister of home country, Mrs. Winston Churchill is shown tapping the latest type of air-raid shelter for British homes. It is a steel table which can be used for meals during the day. At night it is converted into a steel chamber in which the night can be spent with comparative safety.

Some Suggestions On Best Way To Keep Flowers Fresh

To make a choice bouquet that will last as long as possible, cut at leastwise the stems of some flowers and stand the bunch for several hours in a large container, in water up to their necks. Trim off all leaves and parts not needed, the shorter your stems, the longer the life of your bouquet.

Flowers with watery stems, such as dahlias, hollyhocks, poppies and nigella, will keep longer if the stems are immediately sealed against bleeding by dipping the ends into boiling water or singeing them over a flame. This treatment will sometimes reverse flowers which are beginning to wilt. Other flowers will revive better if put into a large jar of cold water.

No known chemical will preserve flowers, though some believe aspirin or salt benzoate will retard the charcoal or potassium nitrate, which encourages the development of bacteria. The water should be changed daily. The receptacle washed and all decaying leaves cut away, as these poison the water. If there are plant lice on the stems, remove these by running a strong stream of water over them.

Do not stand a bouquet where the sunlight nor near a radiator. Put in a cool room during the night. Do not let the stems rest on the bottom of the container to block the free drinking of water. The shaking stems will prevent this. The bouquet should be trimmed back as much or two from woody stems, if they should be crushed or still add more water.

Dr. C. C. Brown, in a column, has been told the water as it evaporates or is drawn up. A wide mouth container is better than one with a narrow neck as it is good to have the water exposed to the air.

A Straight Shooter

R.A.F. Pilot Bats Middle East

Flyer officer Ernest Mason, a bearded Blackpool pilot who has Italian planes for the last two months of the Italian campaign, has been awarded a Distinguished Flying Cross for gallantry, initiative and dash in the middle east. He has shot down more than 10 Italian planes since Dec. 1. One may Sabbath he attacked nine machines and bagged three within eight minutes.

Motto displayed in the window of a London shop is: "If you can't get what you like then like what you can get."

R.A.F. DEMONSTRATES ACCURACY AS IT FINISHES OFF THE SAN GIORGIO

Used as a fortress in Turkish harbor after it had been badly damaged by R.A.F. in January, Italian cruiser San Giorgio was again severely damaged and set on fire before Turkish Feb. 21. The air ministry pictures show the ship burning furiously antiaircraft. Of 9,522 tons and crew of 1,200, the ship was destroyed and 747 taken, the San Giorgio in heavy battle and aircraft gun in addition to her original armament and had been turned into a Turkish fleet.

IT'S A TABLE BY DAY, A SHELTER BY NIGHT

With Herbert Morrison, Britain's minister of home country, Mrs. Winston Churchill is shown tapping the latest type of air-raid shelter for British homes. It is a steel table which can be used for meals during the day. At night it is converted into a steel chamber in which the night can be spent with comparative safety.

One of Managua's oldest institutions, the rocking chair brigades, must go according to the Chief of Police. The rocking chairs and the brigades are said to block sidewalks, forcing pedestrians to walk in the streets, thus causing accidents.

At midnight the men of the house pull out rocking chairs of all sizes and begin to rock. Besides being one method for cooling off, it also allows the women to chat with one another and to display feminine charms and grace.

It is believed the women, as it vitally affects the established social system, for most women remain in their homes during the day.

Work Of Specialists

Horsemen Nails Have Only Recently Been Made By Machinery

Horsemen nails were the last nails to be made by machinery. Till recent years they were all forged by a small class of specialists, so specialized that at the nail makers' annual dinner, the names of horsemen nails always died at a table set apart. The metal of the nail must be of a consistency to wear equally well on stone, otherwise the horse would soon stand on six raw, bleeding nails.

The great service rendered to the British world by Britain in providing the lives of tens of thousands of pilgrims has been greatly appreciated.

A Wise Choice

London Bobby Would Sacrifice Him To Keep His Head

In a letter to a newspaper a woman expressed her Rotten's hobbies would be held by the end of the war because of the tin helmets they now wear.

Comes In Very Handy

Infrared Lamp Used For Frying Many Things Around Home

More and more are infrared rays being utilized for frying food. These heat rays in suitable reflectors have been utilized for several years to dry very moisty, the loquacious, for example, automobile bodies. Now small infrared lamps have been given the job of drying many things around the home.

A mechanical stonemason has been engaged to the United States. His chief handicap is that it, in fact, is a mechanical stonemason.

The happy-moth caterpillar, resembling an eight-legged, two-tailed, is a pest.

An early English name for asphalt was "wild water cress," since the leaves "swim cress, waggling."

Nothing Worth Destroying

Buildings In Berlin Cannot Compare To Those London Lost

In one sense Berlin can congratulate itself on being proof against reprisals from the air; there is nothing in the city worth destroying and a return for what was lost in London. There are no great public buildings, no marble gowns of Hinges also are not 60 years old. There are no great churches, no comparable houses which were built and later has destroyed.

There is the army built at the end of the seventeenth century, but the ruins of most of the buildings are left for themselves. The "new" from Hall of 1861-70 hardly merit the name of the city. The Prussian Diet is not yet a century old.

Berlin was an inconsiderable town in an inconsiderable state when the Lewis Carroll remark that "the least sitting principle has been carried out everywhere with a relation money which makes some parts of Berlin look like a fort. The house" is as good for its later development—Manchester Guardian.

Night Life Underground

Fever Poles In London Are Chilled Air Raid Shelters

The War Illustrated says: London Transport officials made a slightly census of the numbers of people who use the Underground and Tube stations at night as an air raid shelter. The highest figure recorded—17,000—was on the night of September 27, for Londoners had been made uneasy by heavy raids over central London on the previous night of the 26th, and were taking no chances. The average figure is about 10,000. On Christmas night it dropped to 7,000. The present figure is 10,000. As the night grows darker, the officials, most of their guests are taken to the air raid shelters. It is a very much better accommodation than the large public shelters in many a provincial town and Lord Horder, after touring them at Manchester, advised people to stay at home during the night.

Spirit Of The Vikings

Norwegian Sailors Refused Help

Although the Norwegian freighter Kerck was sunk 100 miles from the coast of Norway, a few members of the crew were rescued. The ship was a large Atlantic, which broke loose from the sinking ship. As the survivors lay on the water, the ship was approached them.

Salvaged After Use

Old Shells Tossed After Nightly Needed For War Effort

The British War Effort is now using old shells as night shells on longish old shells as night shells. It is all right with directions of Canada's British salvagers campaign, but they'd like the losers to pick up the shells and turn them in at the end of the war.

The discarded forger is just one of the many things that are being used in the war effort. The war effort is now using old shells as night shells on longish old shells as night shells. It is all right with directions of Canada's British salvagers campaign, but they'd like the losers to pick up the shells and turn them in at the end of the war.

A Rare Achievement

Pilot Felt Destroying Bridges From The Air Very Difficult

The Royal Air Force is doing a vital bridge in Albania only serves to emphasize the rarity of the feat. The pilot who did it, a British pilot, was the first to do it. The pilot who did it, a British pilot, was the first to do it. The pilot who did it, a British pilot, was the first to do it.
